ENVIRONMENTAL INSTRUMENTATION - HYGROMETERS

With weather conditions playing a major part in many aspects of our lives, it can be important to monitor the changing conditions.

Brannan offers a wide range of hygrometers which measure relative humidity (%RH). These instruments are ideal for both laboratory and educational environments and are made using the best quality materials to ensure accuracy, durability and ease of use. Our digital hygrometers have the additional function of max min temperature recording. Our whirling hygrometers and Masons hygrometer use the wet and dry principal to measure %RH.
